Eco-responsibility at the heart of our « Greenfurbishing and circular economy » commitments

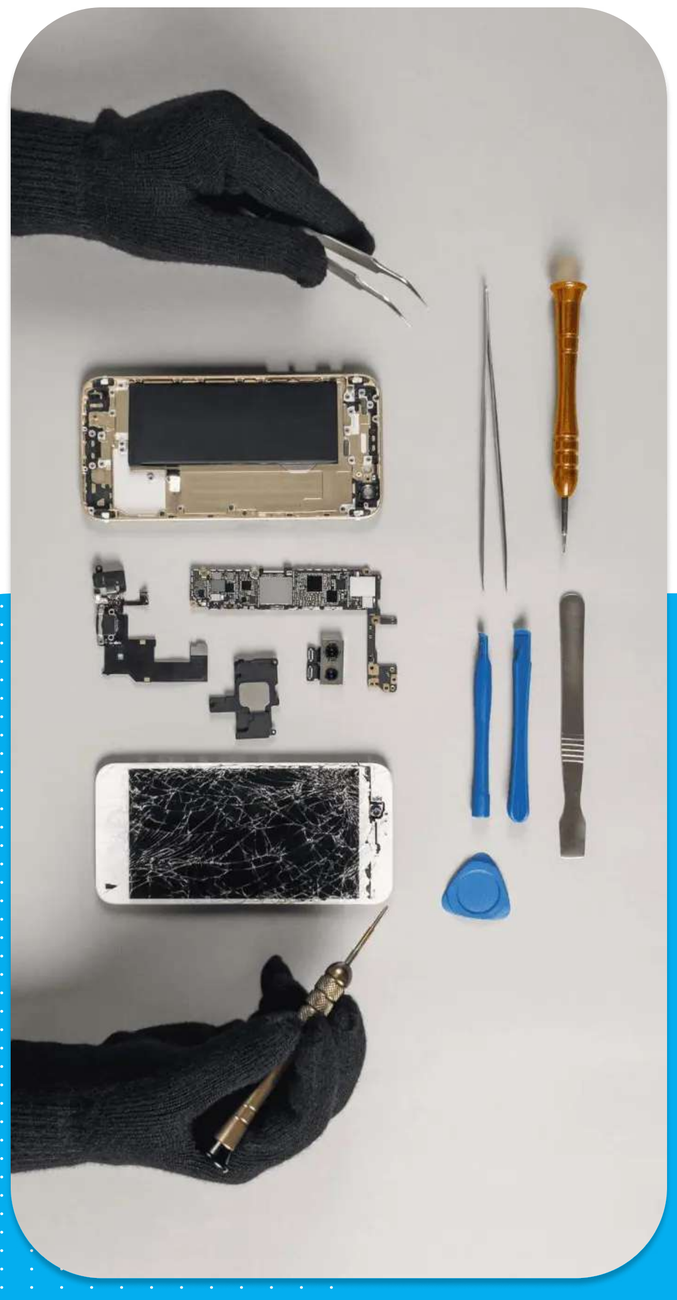

Greenfurbishing and circular economy

We recognize our responsibility in commercial actions in terms of their economic, social and environmental impact. We then give used IT equipment a **second life after data erasure and refurbishment**.

"**SOCIALGREEN**" represents our sustainable, social and ecological value creation:
We give a second life to IT equipment after deleting the data on it and refurbishing it. IT remarketing preserves resources and the climate, and reduces waste.

Working with DIS-CONNECT is a +

Our collaboration with our trusted partners enables us to provide quality services to satisfy you, because you are our priority.

1. We give used IT equipment a second life by erasing data and refurbishing it.
2. IT remarketing preserves resources and the climate, and reduces the amount of waste.
3. We have designed the entire process to facilitate access for people with reduced mobility.
